

Simple instructions

Complete the white fields, tick the confirmations, save the PDF, and reply with it attached to the same email thread. Your technical person may complete it. Do not enter passwords, tokens, private keys, signing secrets or other credentials.

Important: the submission API is where Nova sends requests to TyganPay. The callback URL is where Nova receives status callbacks. The outbound source IP is the public address Nova uses when calling TyganPay. These are three different items.

1. Client and technical contact

Client legal/company name

Example: Nova Bank Online

Nova Bank Online

TyganPay client ID

Example: TPCL-20260712-000001

TPCL-20260712-000001

Technical contact full name

Example: Sam Lee

Nova Trusty

Technical contact role

Example: Integration Engineer

Integration Engineer

Technical contact email

Example: api-team@example.com

novatrusty2@gmail.com

Technical contact phone (optional)

Example: +27 00 000 0000

2. Endpoints and callback contract

Nova submission API URL

Example: <https://api.example.com/api/v1>

<https://nova-bank-api-production-7311.up.railway.app/api/v1>

Nova callback receiver URL (required)

Example: <https://api.example.com/callbacks/tyganpay>

<https://nova-bank-api-production-7311.up.railway.app/api/v1/webhooks/tyganpay>

Callback HTTP method (required)

Example: POST

POST

Expected callback success status (required)

Example: 200 or 204

200

Callback authentication method name only

Example: HMAC-SHA256 header; no secret

HMAC-SHA256 header X-Nova-Signature; no secret

Non-secret health URL (optional)

Example: <https://api.example.com/health>

<https://nova-bank-api-production-7311.up.railway.app/api/v1/health>

3. Network and test window

Stable public outbound source IPv4/IPv6 (required)

Example: 203.0.113.10; not an ingress/DNS IP

IPv4 51.75.64.28; IPv6 2001:41d0:701:1100::cf8d (OVH VPS vps-58bb86af.vps.ovh.net)

Must Nova allowlist TyganPay source IPs? Give details.

Example: No, or Yes - please supply addresses

No — Nova production callback/health endpoints are publicly reachable; TyganPay source IP allowlist

Preferred review-only test window in SAST

Example: 2026-07-21, 10:00-11:00 SAST

2026-07-21, 10:00-11:00 SAST

4. Confirmations

- ☒ The callback hostname resolves publicly.
- ☒ The callback presents a currently valid TLS certificate.
- ☒ The callback is reachable from an external server.
- ☒ The source IP address supplied is stable outbound egress, not ingress or ordinary DNS resolution.
- ☒ Nova is ready for one authenticated review-only connectivity test after TyganPay verification.
- ☒ This PDF contains no bearer token, password, private key, signing secret or other credential value.

5. Completed by

Full name

Example: Sam Lee

Nova Trusty

Role

Example: Integration Engineer

Integration Engineer

Date completed

Example: 2026-07-21

2026-07-20

What happens after return

TyganPay will ingest this PDF, independently verify DNS, TLS, reachability and the source-IP boundary, then create the required internal readiness record. If all checks pass, TyganPay will coordinate a short-lived one-time credential reveal and one review-only test. This form does not authorize execution or movement.
